

The cities of Sacramento and West Sacramento are planning to eliminate natural gas in our homes.

1. All-electric homes depend on only one source of energy. We have learned that Energy Diversity is key to our safety and health in emergencies.
2. All-electric homes have lower values than homes with Energy Diversity.
3. All-electric homes are more costly to keep warm, heat your water, dry your clothes, cook your food, and enjoy a warm cozy fire on a cold winter's night.
4. Natural gas is used most of the time by electric utilities to create the electricity you buy. That creates an overall lower net efficiency and a higher carbon footprint than natural gas used directly in the home.
5. Part of the proposed plan may include "Mandated Electrification" of EXISTING HOMES that might entail changing out all gas appliances when you sell your home.

This PLAN needs to be put ON HOLD until electric utilities can ensure SAFE operation without power outages and reliable energy supply not using fossil fuels to create electricity.

Speak up now and put this plan on hold before it becomes law.
