

Why Overzealous Banning of Natural Gas Use in Homes is So Unwise

All-electric homes are **NOT SAFE OR DEPENDABLE**

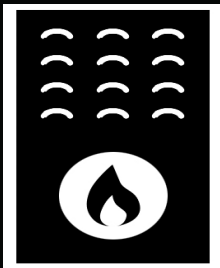

Medical equipment, furnaces, water heaters, lights, computers, stoves, security systems and other vital products are down when electric outages occur with forest fires and extreme weather which happens often. Gas is rarely unavailable.

All-electric homes are **EXPENSIVE**

Electricity is three times the cost of natural gas placing an economic burden on families. Any mandate to change out existing gas appliances is financially devastating.

All-electric home **MANDATES LOSS OF CHOICE**

With so much stress and loss from health concerns, this threat to take a family's choice in such a basic human need is outrageous and shows a total lack of respect for those who may have already changed out from woodburning to natural gas.

New natural gas furnaces are more than **90% efficient**

And, 16 times less expensive than electric heating.

Solar and wind can be part of our selection

New technologies are welcome. But we are nowhere near ready to store that power for surge times.

This generation cannot eliminate natural gas

54% of Sacramento area electricity is generated from natural gas.
